

“Procedu” - Documentation

Procedu is a tool/app where you can create logic by arranging blocks.

The green square represents a cursor/player which you can control.

The horizontal line of blocks is the block picker where you click blocks to add them to the code.

The play button on the top right runs the code step by step.

The stop button stops the code instantly.

‘Value’ is a variable that can be changed with the blocks too.

BLOCK LOGIC:

L = Move left

R = Move right

U = Move up

D = Move down

A = Start loop

S = End loop, if the Value is above 0 then restart from the **A** block and decrease Value by 1.

Example: Use in combination with the **V** block to repeat something a specific number of times.

V = Increase the Value by 1

Z = Set the Value to 0

I = Set the Value to infinity

W = Wait 0.5s before next step

F = Skip the next step if the 'value' is below 1.

Example: Use to check the end of a loop

B = Play a beep sound, hopefully a lot of them doesn't become too obnoxious...

P = *Only* run next is spacebar is held down

N = *Don't* run next is spacebar is held down

E = Go back to the start of the code

Q = Quit the app
